## 1. Product Introduction

**AI File Organizer — Web Edition** is the international, browser-based version of AI File Organizer. It helps you sort messy files into tidy folders, and extract text from images with OCR — all running **inside your browser**.

Highlights:

- **No install.** Open the web page and start immediately.
- **Free.** No account, no payment.
- **Private by design.** Files are processed locally on your device and never uploaded.
- **Two tools:** File Organizer (sort into categories) and OCR (image → text).

**Tip:** The web edition is ideal for quick, one-off organizing on any computer or phone. For offline, always-available use on a Mac, see the companion macOS DMG.

## 2. How to Access

1. Open a modern browser (Chrome, Edge, Safari, or Firefox — recent versions).
2. Visit: <https://lixinjiang-ai.github.io/ai-file-organizer-web/>
3. That's it — no download, no sign-up. The page works on desktop and mobile.

Language: the interface defaults to English; use the **中文 / EN** button in the top menu to switch to Chinese.

## 3. Getting Started

- From the top menu, choose **File Organizer** or **OCR**.
- Your files are processed on this device only. You can close the tab at any time.

## 4. Using the File Organizer

1. Open **File Organizer** from the top menu.
2. **Add files:** drag & drop files into the box, or click to select. Multiple files are supported.
3. **Auto-group:** files are grouped by type — Documents, Spreadsheets, Presentations, Images, Archives, Audio, Video, Code, Other.
4. **Review** the category preview.
5. Click **Organize & Download ZIP** to get a tidy archive with one folder per category.
6. Your **original files are never modified**; the ZIP is a new download.

## 5. Using OCR

1. Open **OCR** from the top menu.
2. Upload an image (  /  / ... ).
3. Choose a language (English / 中文), then click **Extract Text**.

4. Copy the recognized text, or download it as a `.txt` file.

**First-time note:** OCR downloads a small language model ( `eng` or `chi_sim` ) on first use, so an internet connection is needed the first time. After that it runs faster. Recognition happens locally in your browser.

## 6. Supported File Types

The File Organizer sorts by extension into these categories:

| Category      | Typical extensions                                                           |
|---------------|------------------------------------------------------------------------------|
| Documents     | <code>.pdf</code> <code>.docx</code> <code>.txt</code> <code>.md</code> ...  |
| Spreadsheets  | <code>.xlsx</code> <code>.csv</code> <code>.xls</code> ...                   |
| Presentations | <code>.pptx</code> <code>.ppt</code> ...                                     |
| Images        | <code>.jpg</code> <code>.png</code> <code>.gif</code> <code>.webp</code> ... |
| Archives      | <code>.zip</code> <code>.rar</code> <code>.7z</code> ...                     |
| Audio         | <code>.mp3</code> <code>.wav</code> <code>.flac</code> ...                   |
| Video         | <code>.mp4</code> <code>.mov</code> <code>.avi</code> ...                    |
| Code          | <code>.js</code> <code>.py</code> <code>.html</code> ...                     |
| Other         | anything not matched above                                                   |

OCR accepts common image formats (JPG / PNG / GIF / WebP).

## 7. Frequently Asked Questions (FAQ)

### Q1: Is my data safe?

Yes. All processing runs in your browser; nothing is uploaded to a server and no files are stored.

### Q2: Do I need to install anything?

No. Just open the URL. There is no account to create.

### Q3: Is it free?

Yes — completely free to use.

### Q4: OCR is slow or not working?

The first recognition downloads the language model (a few MB), so it needs internet on first use. Large images take longer. Use a modern browser.

### Q5: Can I organize very large files?

Processing is client-side; very large batches may be slower or limited by your device memory. For huge jobs, split into smaller batches.

### Q6: Does it work on my phone?

Yes — the interface is responsive and works on phones and tablets.

## 8. Notes & Tips

- Use a recent version of Chrome, Edge, Safari, or Firefox.
- OCR needs internet the first time to fetch its language model.
- Your originals are never changed — the app only produces a new ZIP / text.
- No account, no cloud storage, no usage tracking.

## 9. Privacy & File Handling

- **Local processing:** file organizing and OCR run entirely in your browser. Files are not uploaded.
- **No storage:** we do not store your files or results on any server.
- **No telemetry:** the app does not track usage or send analytics.
- **Open source:** the code is public so you can verify the above claims.
